

Karan Acoustics

There are many high-end amplifier brands, but Karan Acoustics takes such a painstaking approach to electronics design, you cannot imagine the brand at anything apart from the pinnacle of audio technology. This stance comes from Milan Karan's more than 30 years working in professional electronics.

The concepts apply throughout the range; dual mono, DC-coupled pure Class A circuits with high speed, low impedance power supplies and carefully selected components in every part of the circuit. Couple this with

high-grade circuit boards and thick aluminium casework throughout and it's easy to understand why Karan Acoustics amplifiers are highly prized for their performance, longevity and reliability.

Beyond the build quality, Karan strives to make his amplifiers to add or take away as little as possible from the original signal, letting the music speak for itself.
